

PRESS RELEASE
FOR IMMEDIATE RELEASE

**FISO TECHNOLOGIES LAUNCHES THE SMALLEST COMMERCIALY-
AVAILABLE FIBER OPTIC PRESSURE SENSOR FOR THE MEDICAL MARKET**

QUEBEC, Quebec — October 15, 2008 — FISO Technologies Inc., a subsidiary of Roctest Ltd (TSX: RTT) and a leading manufacturer of high-quality fiber optic sensors and measurement systems for challenging and demanding applications, announces the production release of the FOP-M260, the smallest commercially-available fiber optic pressure sensor and the first one below the size of a 1 French catheter. This new sensor, based on MOMS technology, has a diameter of 260 microns (0.010 inches) and accounts for a 50% size reduction over the current FOP-MIV pressure sensor. The development of this sensor is a significant step and provides an immediate solution to situations where the FOP-MIV size was a limitation. The sensor will be officially launched at the Medical Design & Manufacturing "MD&M" exposition, which will be held on October 22-23 at the Minneapolis Convention Center, Minneapolis, MN.

The FOP-M260 sensor shows better thermal performance and better stability than previous generations. Similarly to the previous fiber optic pressure sensors designed for the medical market, the FOP-M260 is compatible with FISO's EVOLUTION product line. By using the White-Light Fabry-Perot Interferometry technology, which has been deployed for more than a decade in challenging applications such as aerospace & defense, medical and process control, FISO customers are assured of accurate and reliable measurements in all field conditions.

"FISO is a unique reference for the medical market, where its sensors are integrated into medical devices. Combined with the FOP-MIV and the soon commercially-available FOP-F125, the FOP-M260 fiber optic miniature pressure sensor is part of the most extensive offer in the market", said Maxim Vachon-Savary, Product Line Manager at FISO Technologies. "The design of the FOP-M260 is similar to the FOP-MIV and will be easily integrated into FISO automatic assembly line, allowing FISO to reach the same high volume than the FOP-MIV, representing tens of thousands of units per year".

About FISO Technologies Inc.

FISO Technologies Inc. designs, manufactures and markets fiber optic sensors and high-precision measuring instruments for challenging and demanding applications in the process control, energy, healthcare and defense markets. Its products are mainly sold internationally. The Company headquarter is located in Quebec City, Quebec (Canada).

FISO Technologies Inc. news releases and product information are available on the Internet at: <http://www.fiso.com>

Caution concerning forward-looking statements

Except for historical information provided herein, the press release may contain information and statements of a forward looking nature concerning the future performance of the Company. These statements are based on suppositions and uncertainties as well as on management's best possible evaluation of future events, and as such involve a number of risk factors. Such factors may include, without excluding other considerations, risks related to foreign exchange fluctuations, evolution in customer demand for the Company's products and services, the impact of price pressure from competitors and general market trends, economic and geopolitical changes. As a result, readers are advised that actual results may differ from expected results. The Company is not required to update or revise publicly its forward-looking statements, except as may be required under applicable law.
